# Safety classification: paired baseline

v1 | threshold = 0.5 | common completed non-PII datasets | higher is better

Each dataset uses the same successful sample IDs for all selected models.
Values are descriptive point estimates; repeated sweeps are not independent replicates.

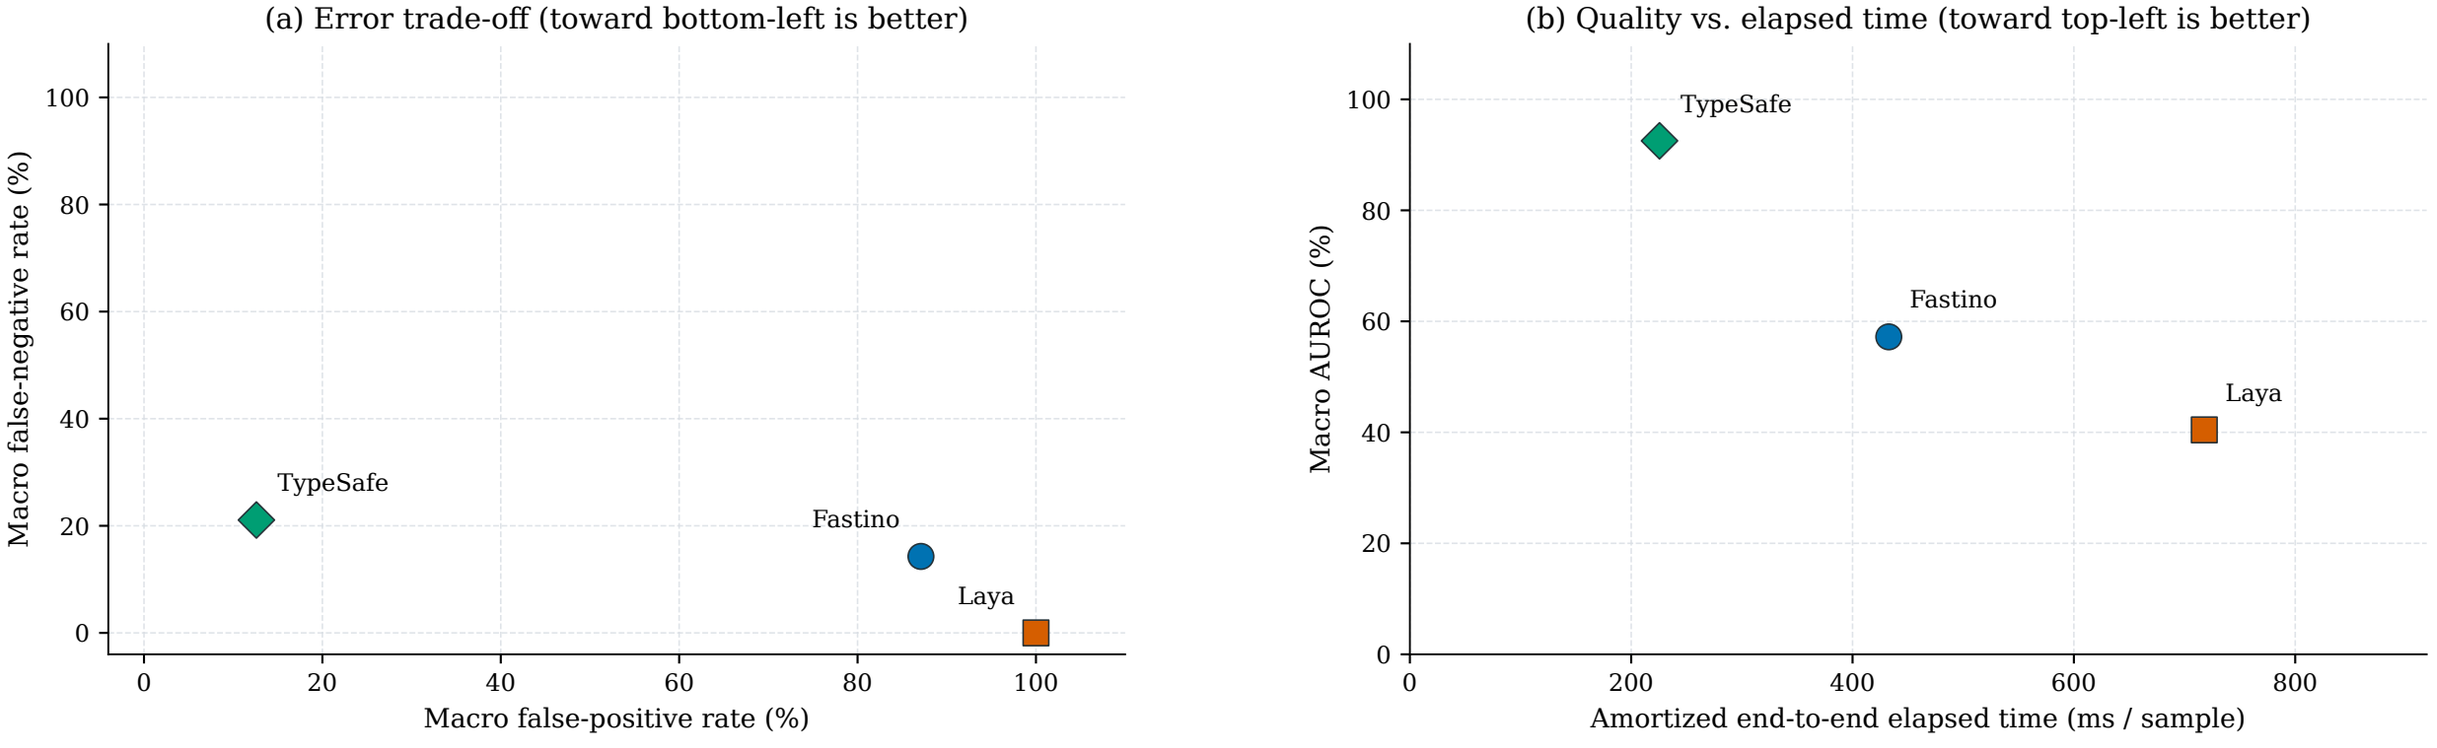

Fastino | request: fastino/GLiDE
resolved: glide_v2

Laya | request: typed-decisions
serving: laya-rl-agent
routed: typed-decisions

TypeSafe | request: jev-latest
resolved: unconfirmed (API response required)

# Baseline quality, errors and elapsed time

v1 | threshold = 0.5 | 4 shared datasets | dataset-macro quality

Elapsed time = total logged elapsed / all processed baseline rows, including failed requests.
Runs occurred at different times; this is not pure inference latency or a request-level percentile.

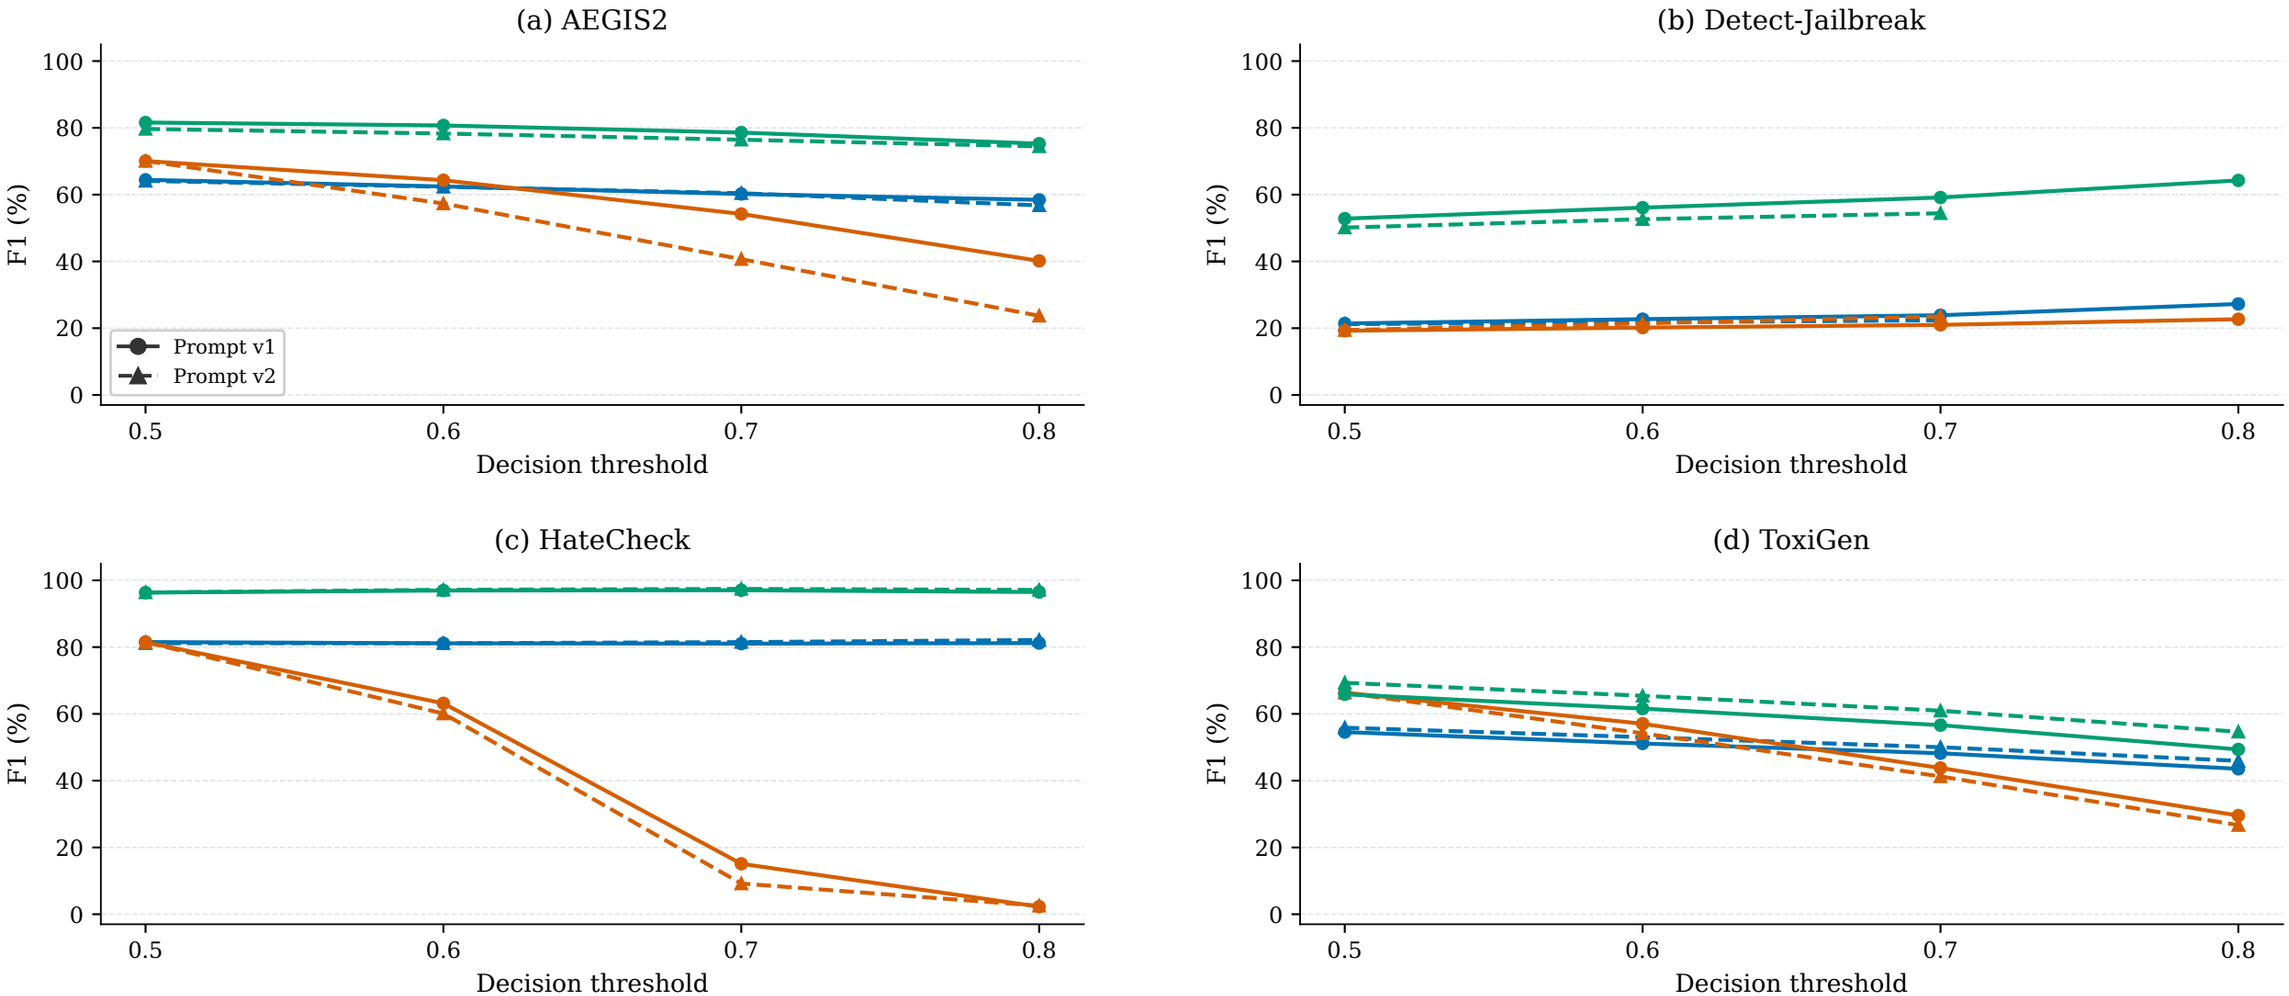

Fastino | request: fastino/GLiDE

# Sensitivity to prompt version and decision threshold

Exploratory test-set sweeps, not held-out model selection

Points use within-configuration paired successful samples; error-driven sample sets can differ across points.
Missing configurations are gaps (not zero scores); lines do not imply independent replicates or confidence intervals.

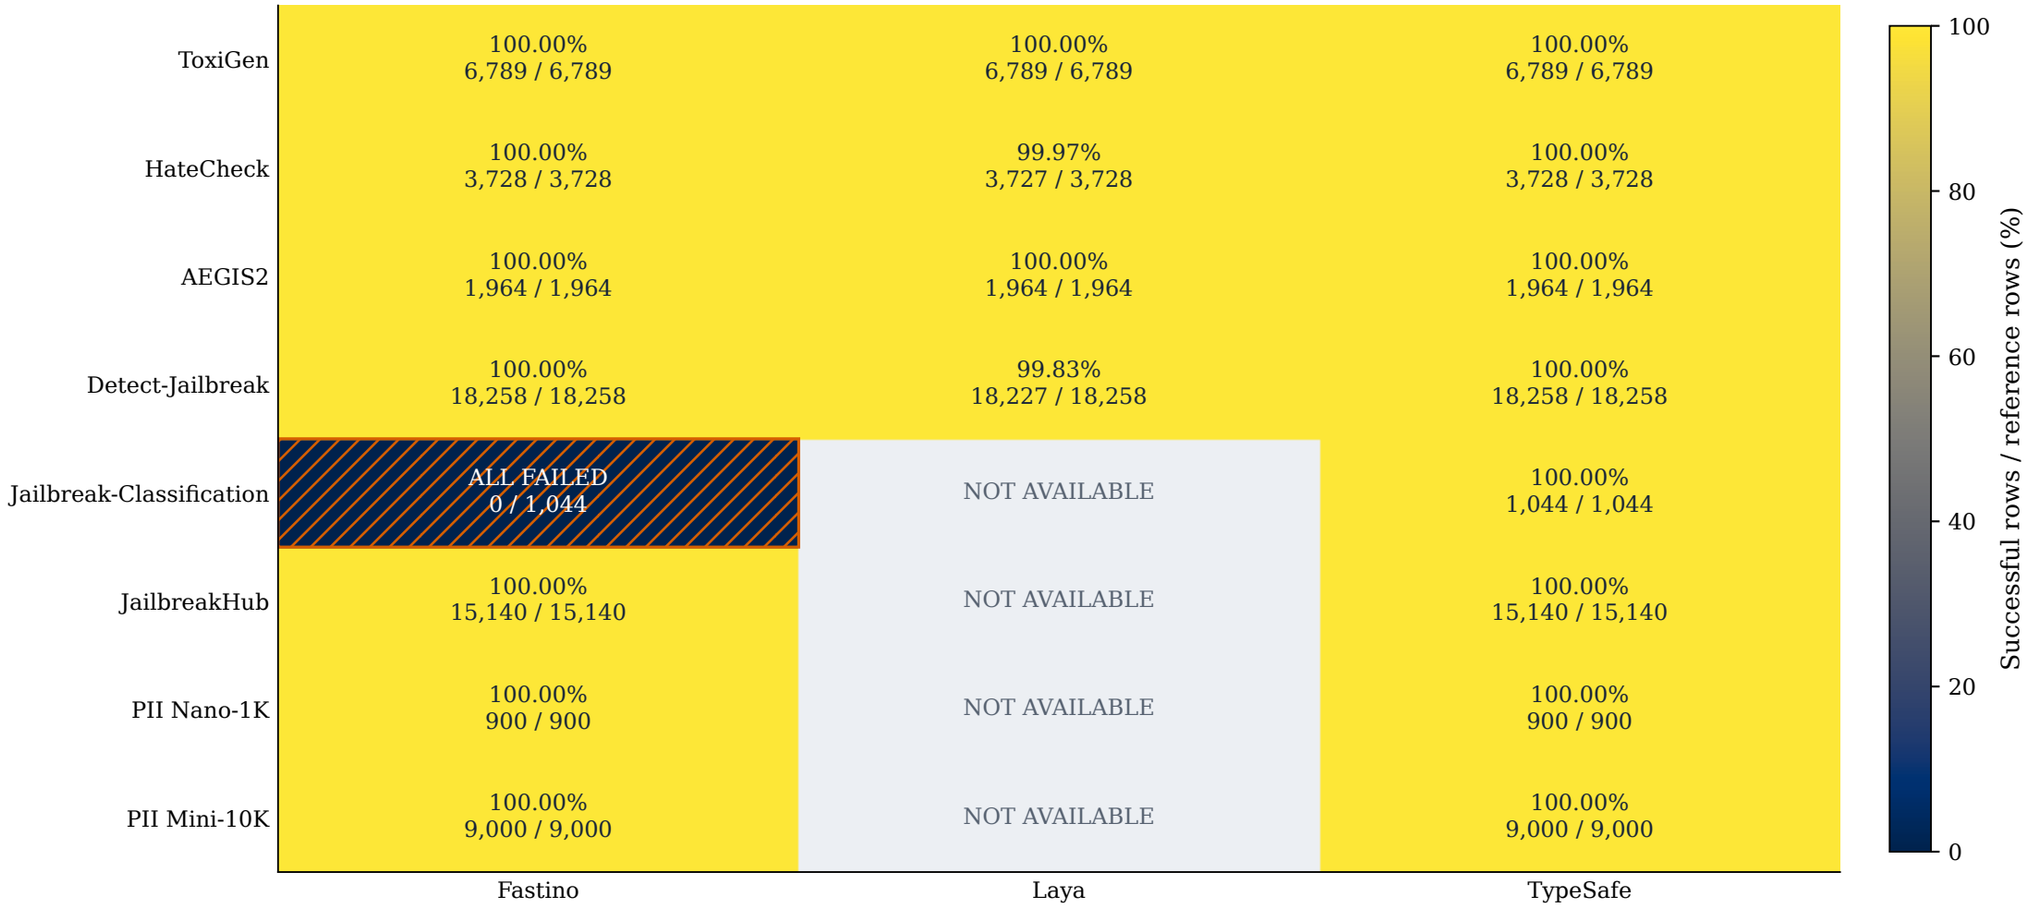

Fastino | request: fastino/GLiDE

# Baseline evaluation coverage and request failures

v1 | threshold = 0.5 | counts are successful / reference rows

Gray = no saved predictions; hatched = complete CSV with no successful requests, not a missing run.
PII rows measure only evaluation coverage, not masking quality. Laya's suite is incomplete.
