Held-out classification — v1, threshold 0.5
hatecheck (n=3,728) / aegis2 (n=1,964) / jailbreak-classification (n=262)
Equal dataset weights; ToxiGen excluded. Training overlap not audited.

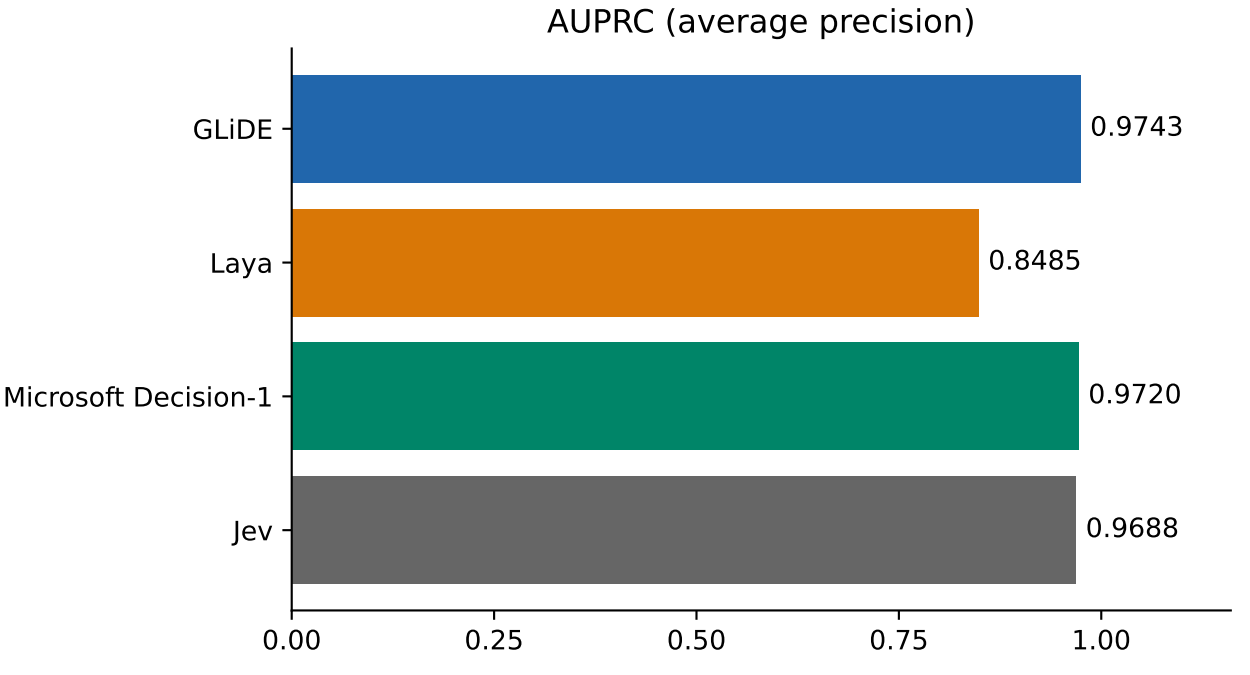

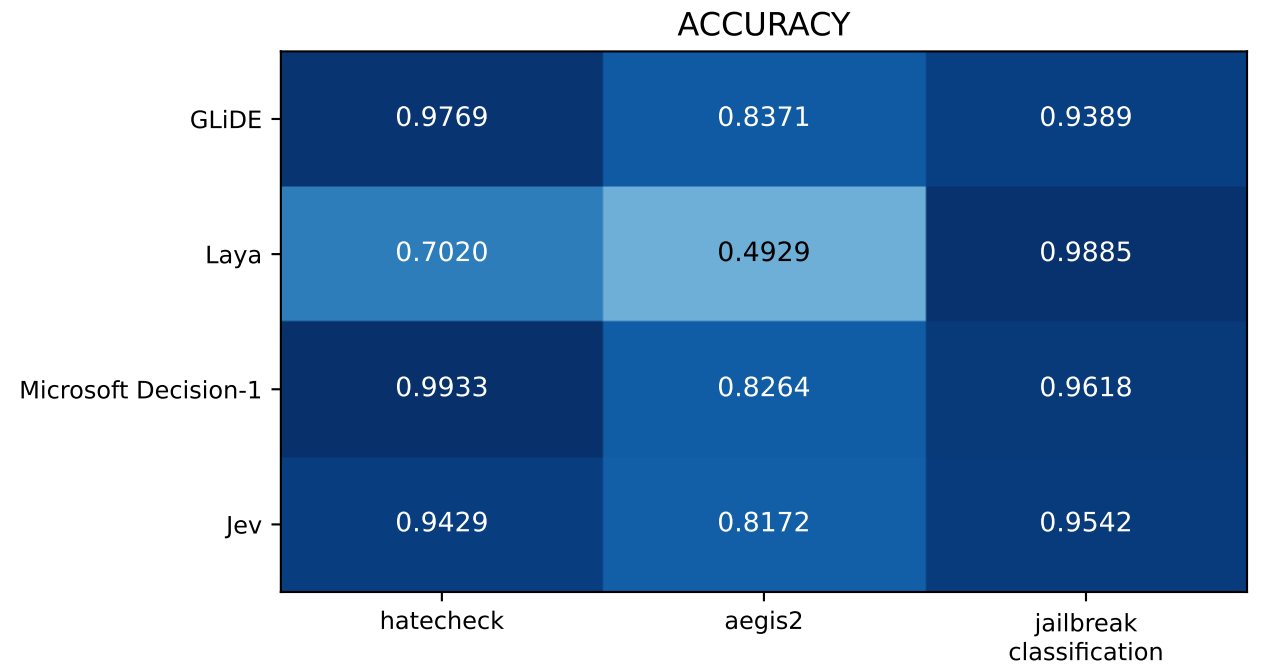

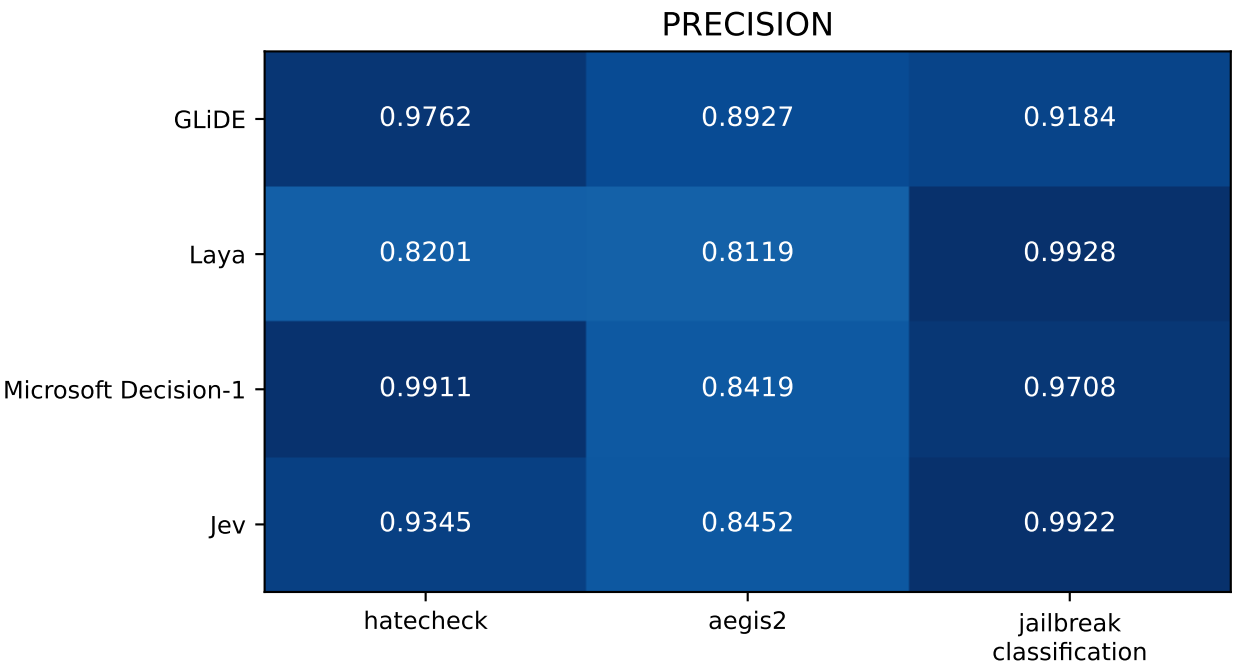

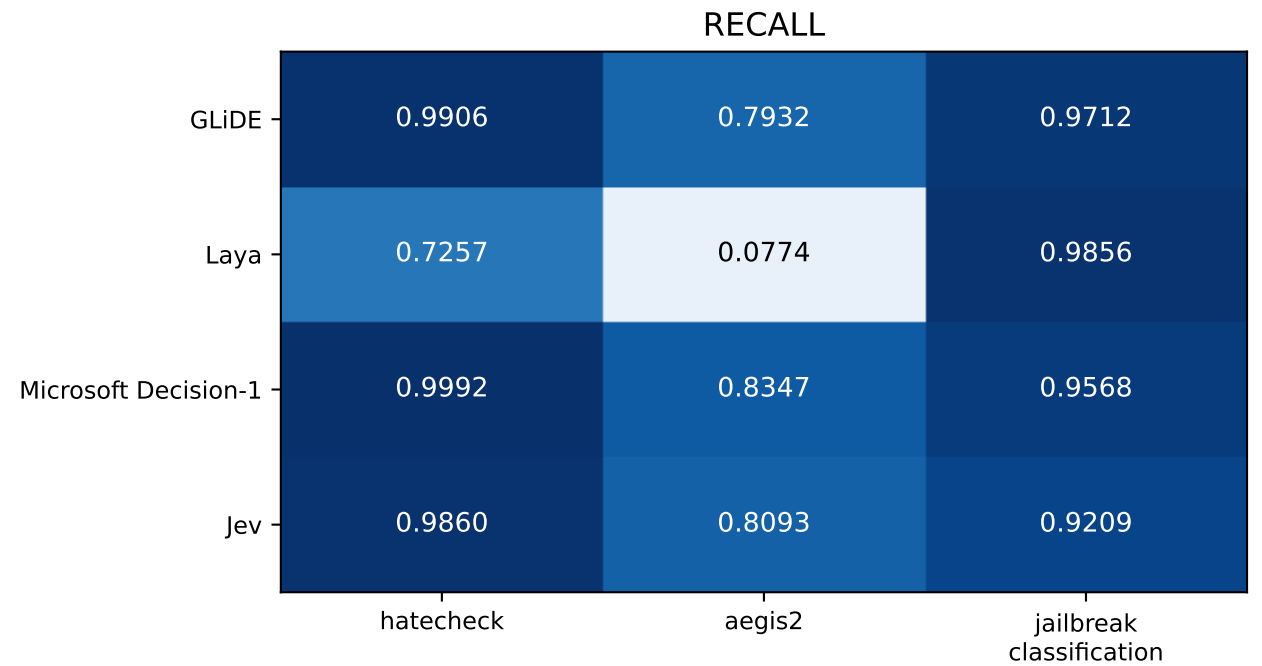

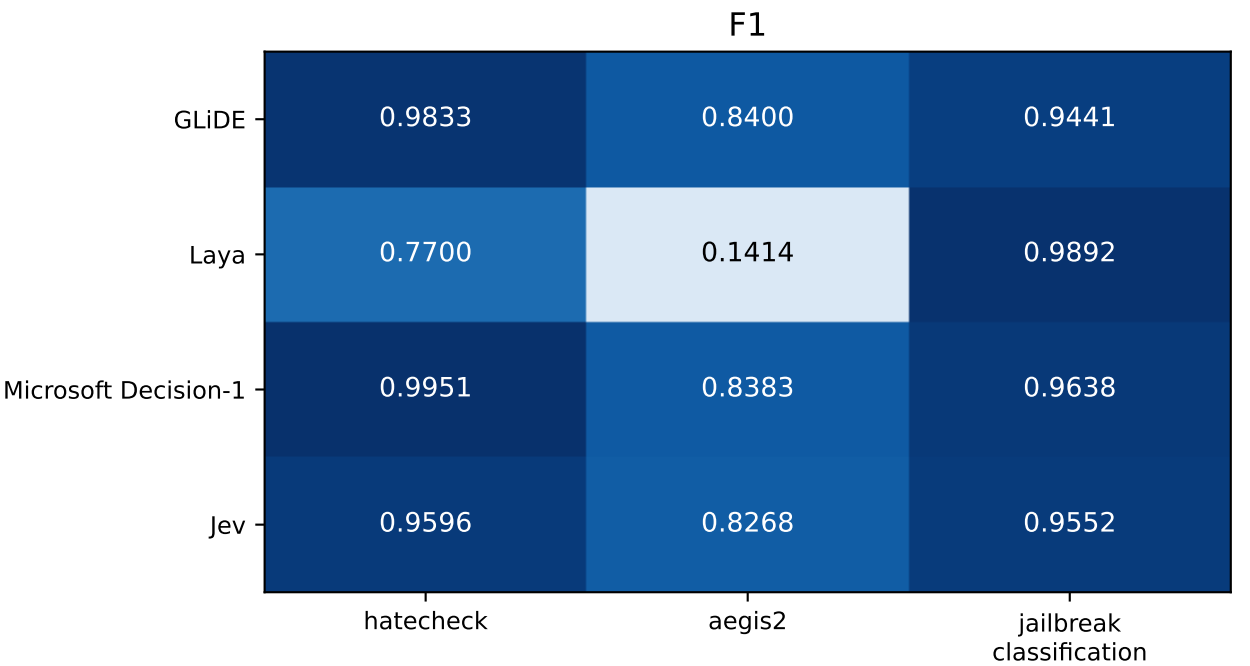

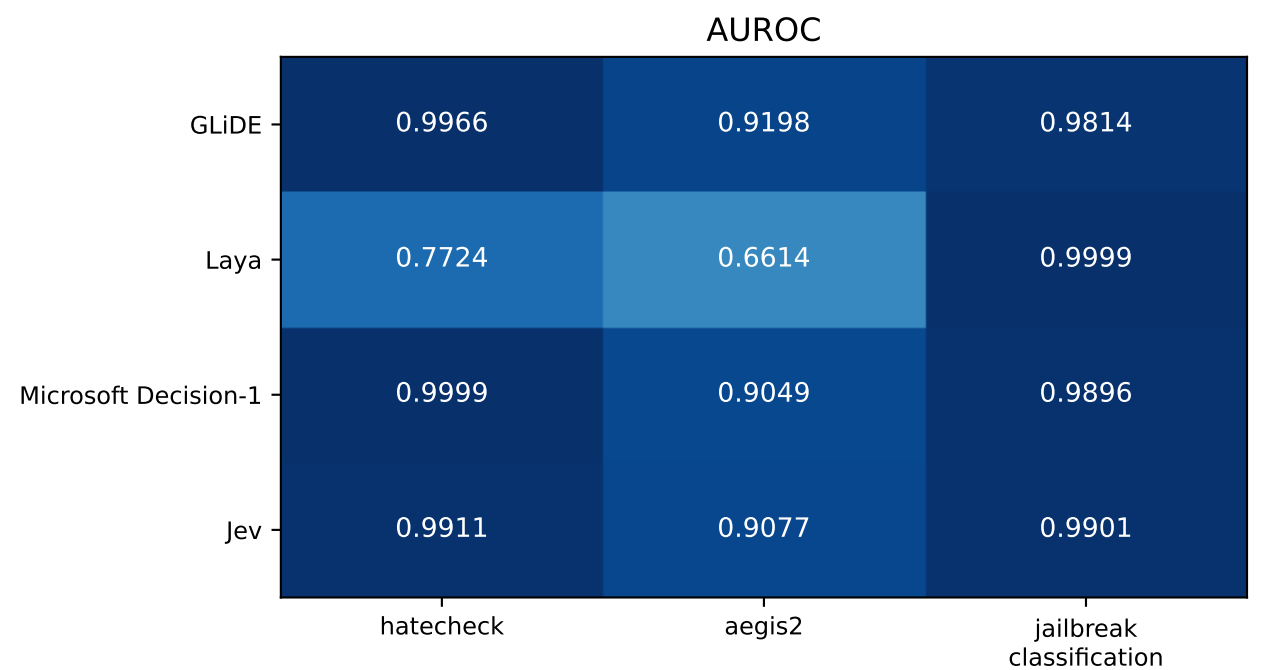

Per-dataset held-out quality — v1, threshold 0.5
Official held-out partitions; matching rows verified. Training overlap has not been audited.

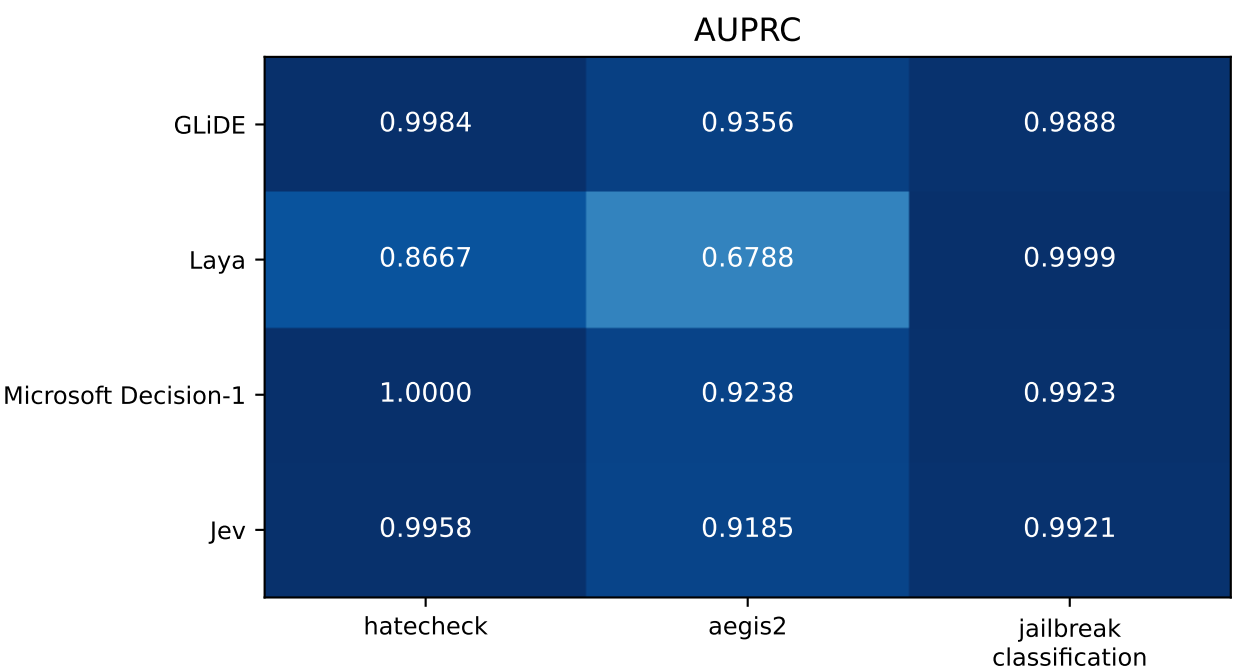

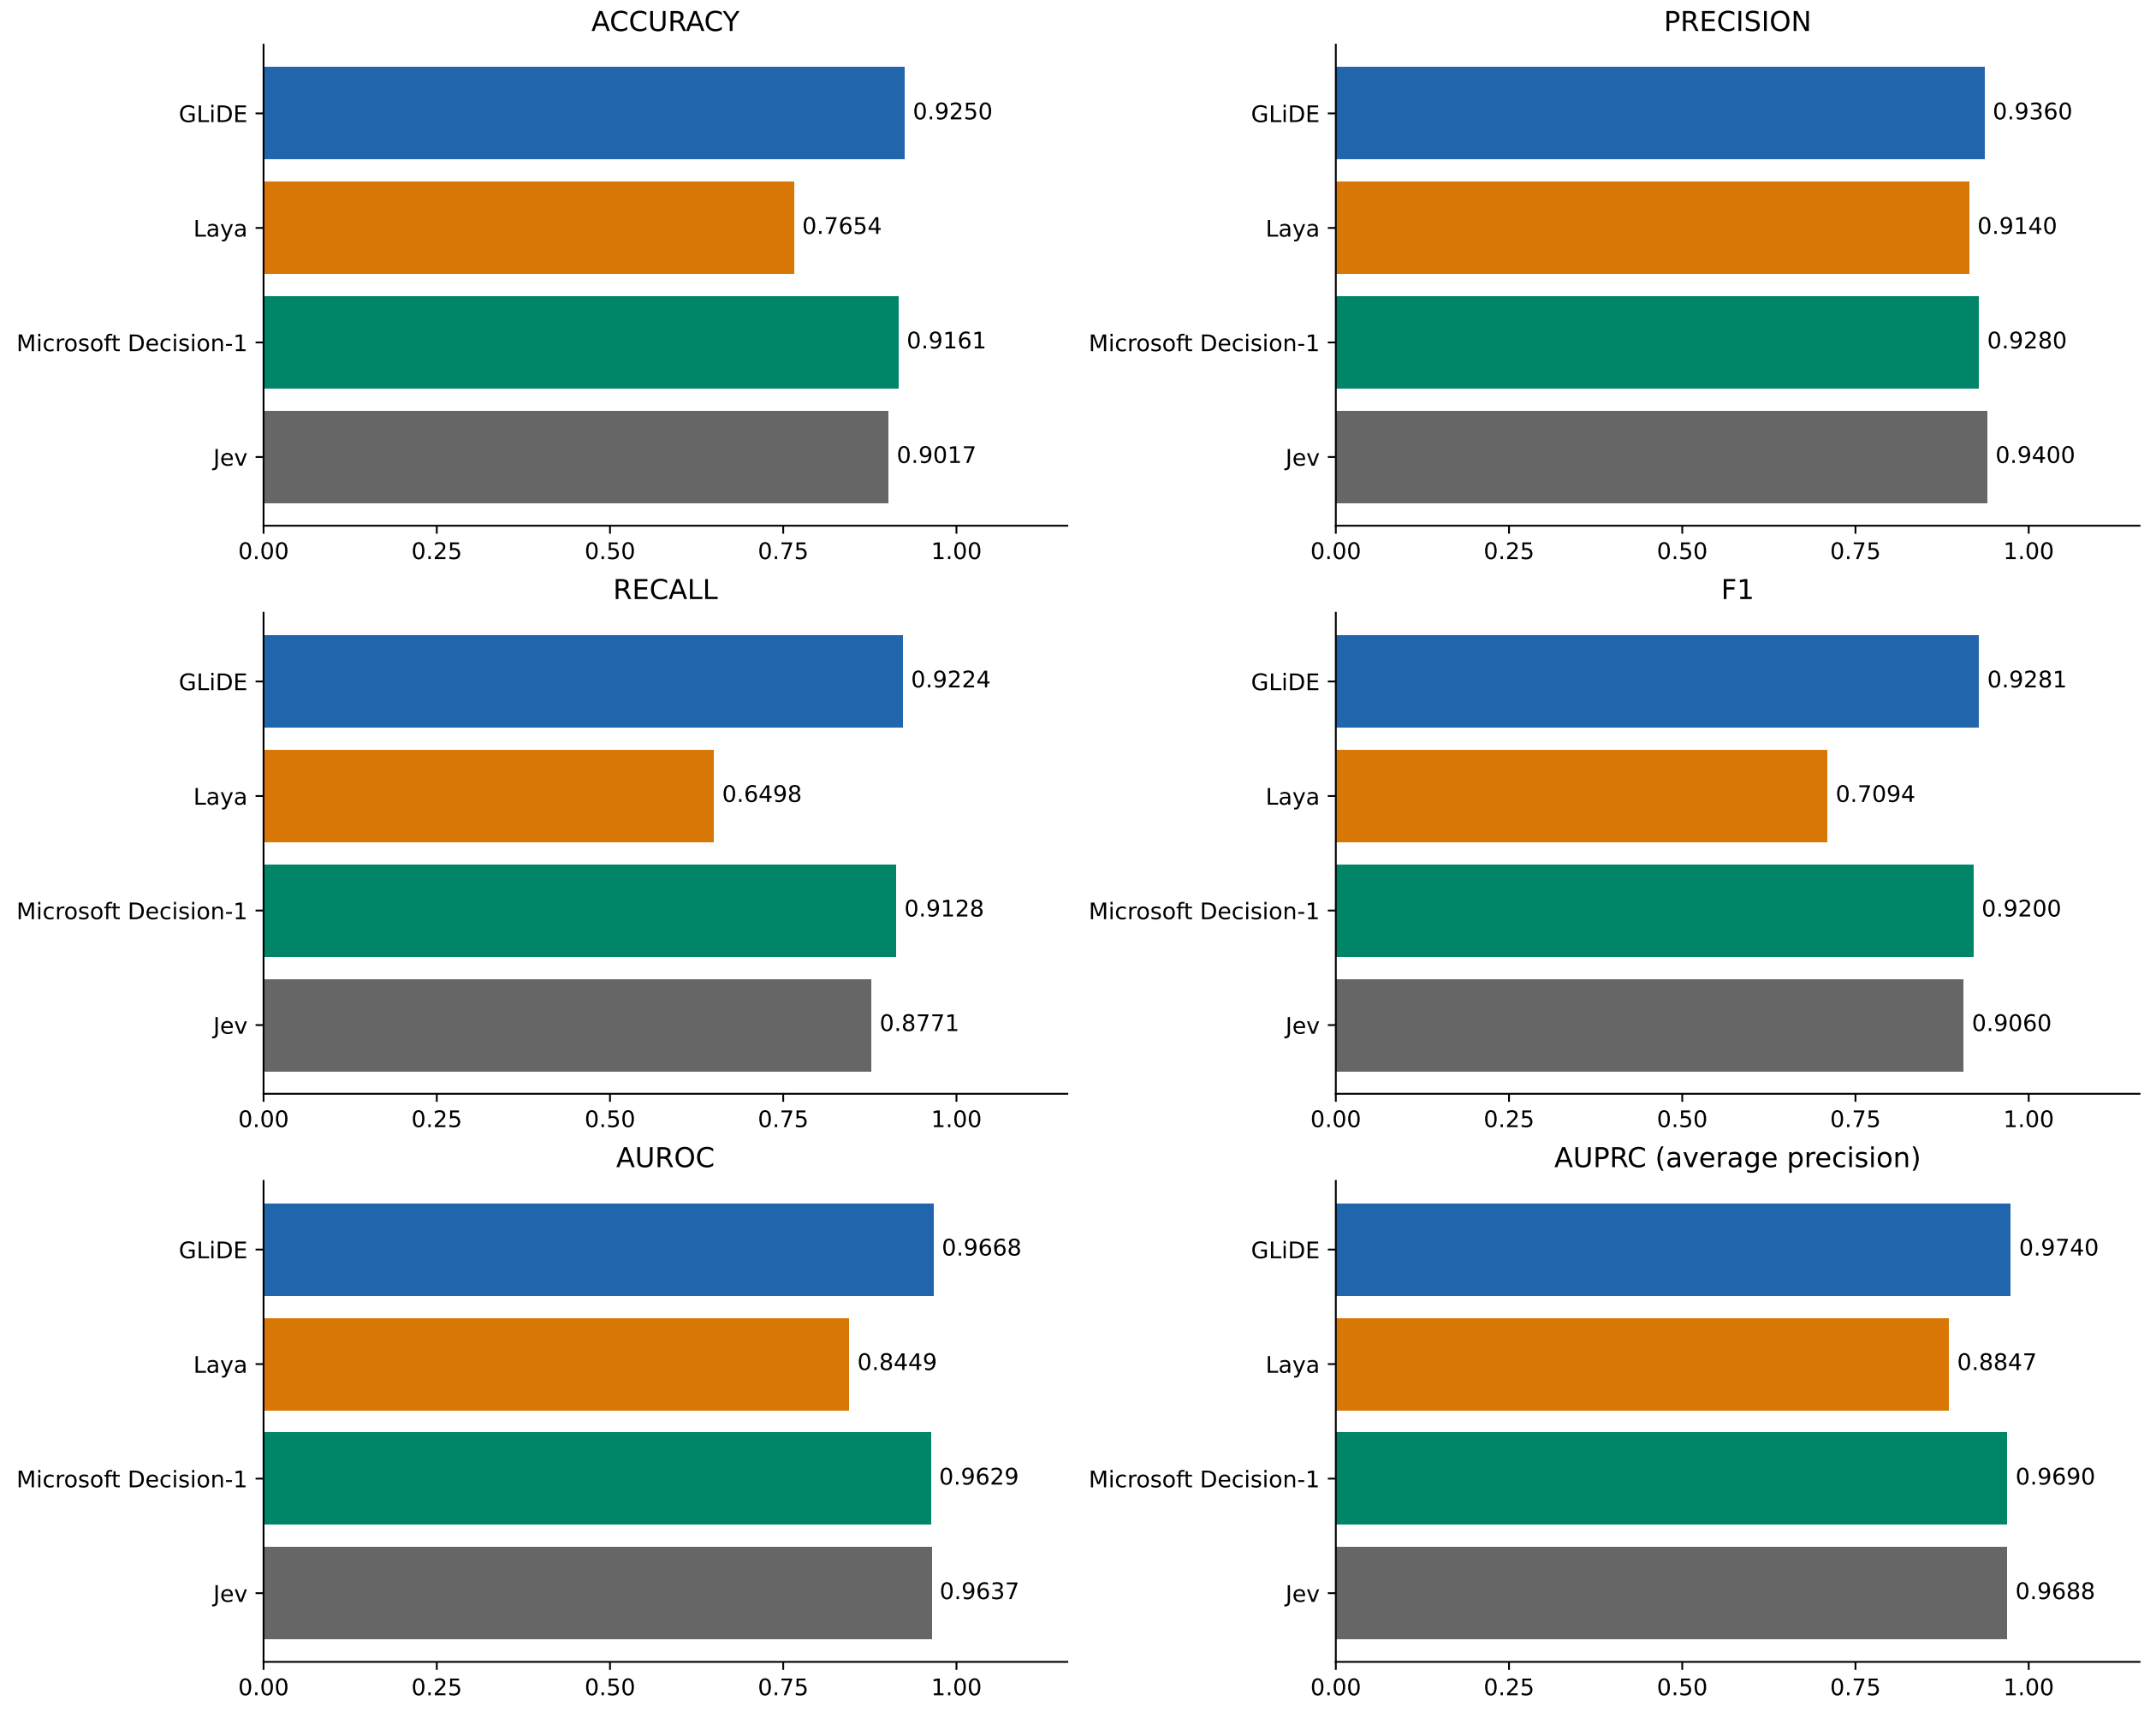

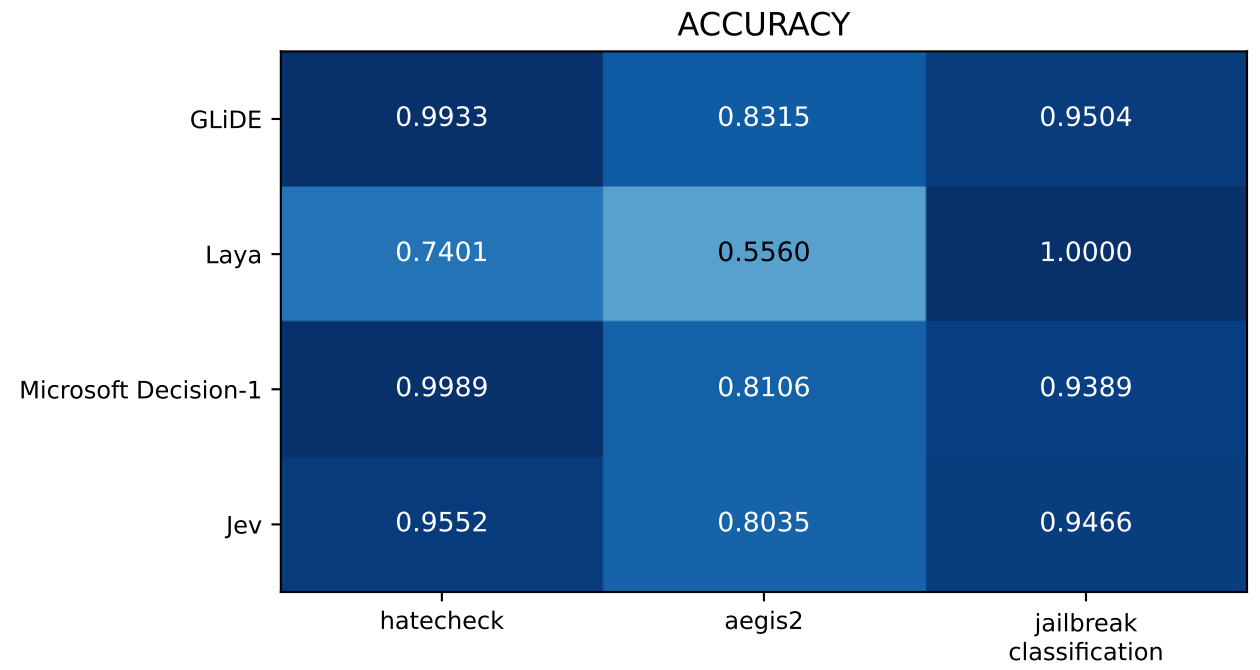

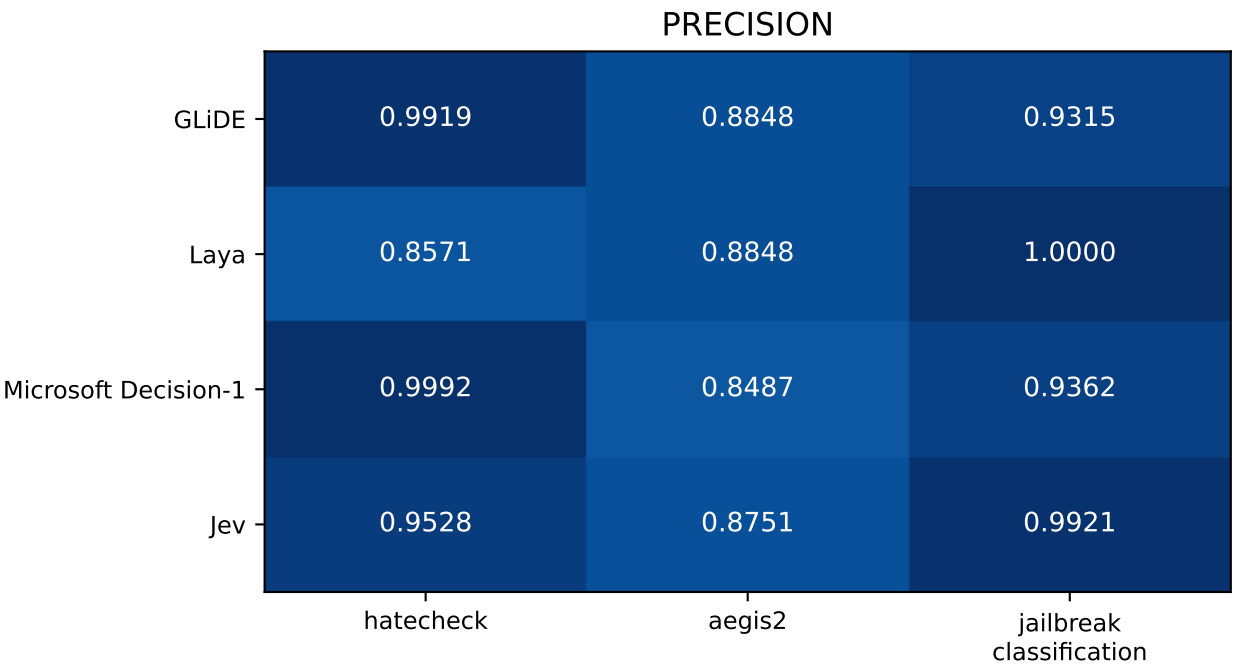

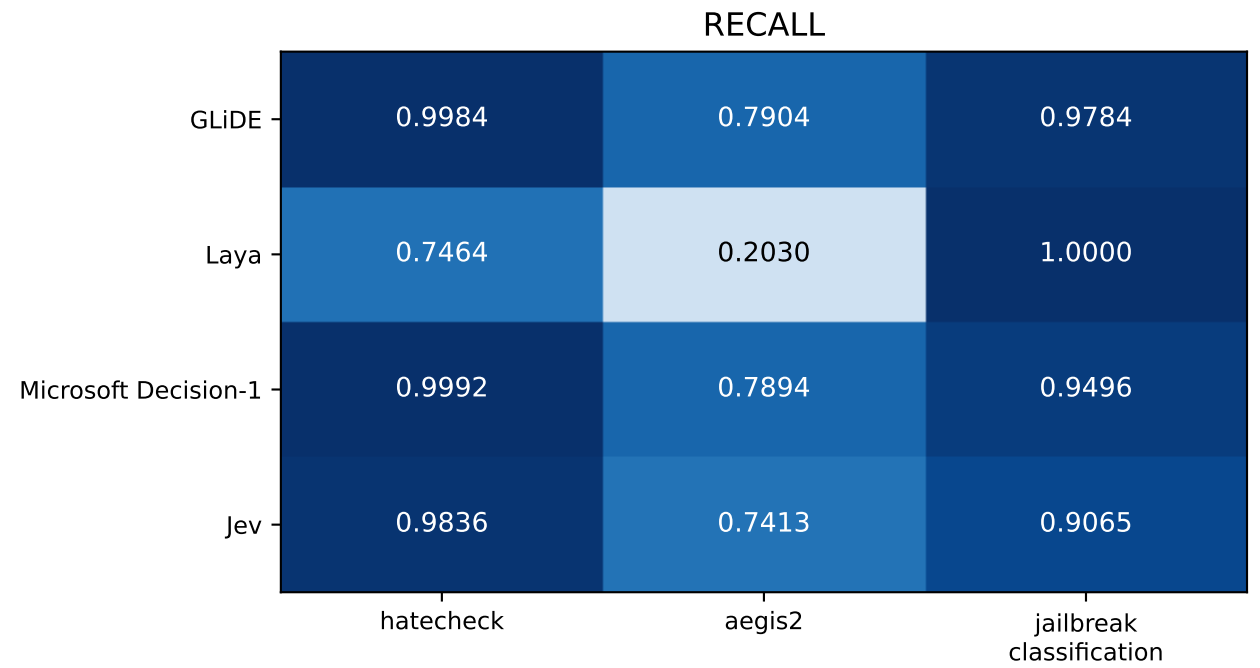

Held-out classification — v2, threshold 0.5
hatecheck (n=3,728) / aegis2 (n=1,964) / jailbreak-classification (n=262)
Equal dataset weights; ToxiGen excluded. Training overlap not audited.

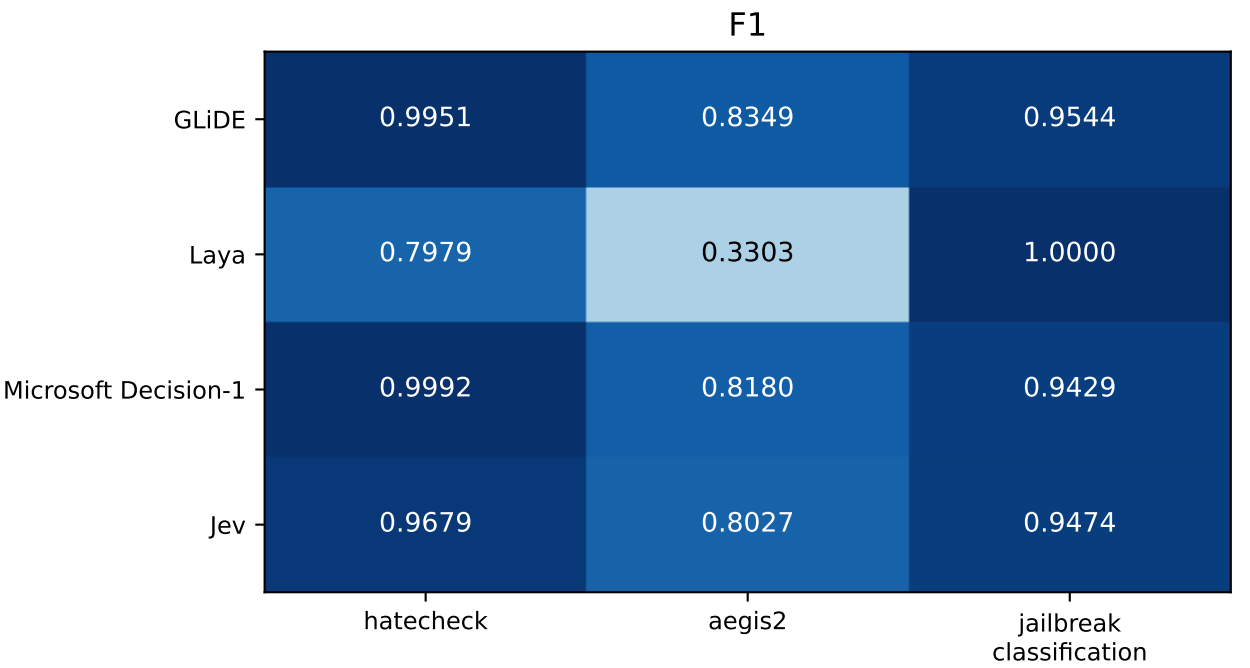

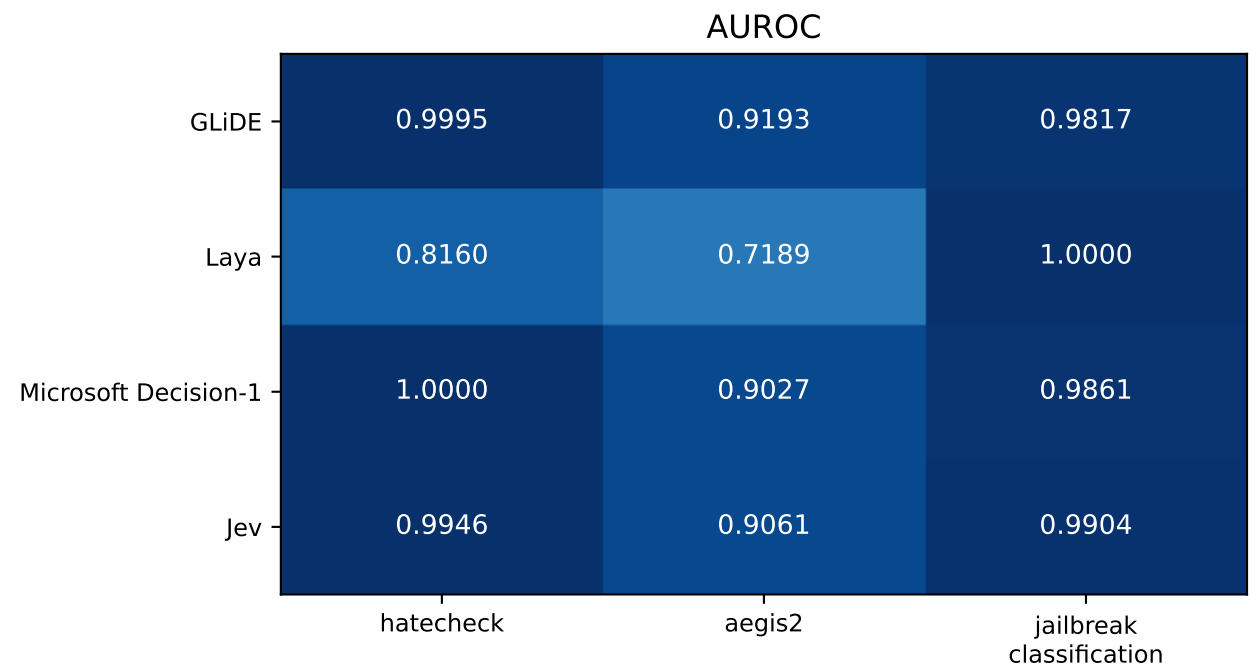

Per-dataset held-out quality — v2, threshold 0.5
Official held-out partitions; matching rows verified. Training overlap has not been audited.

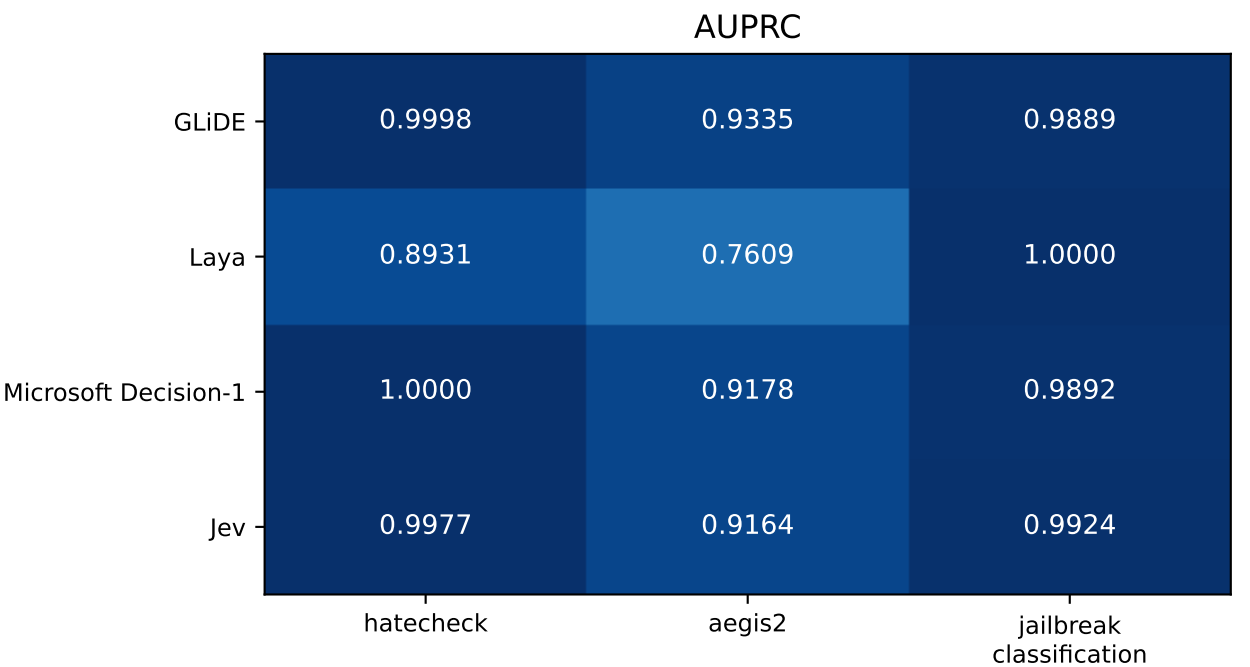

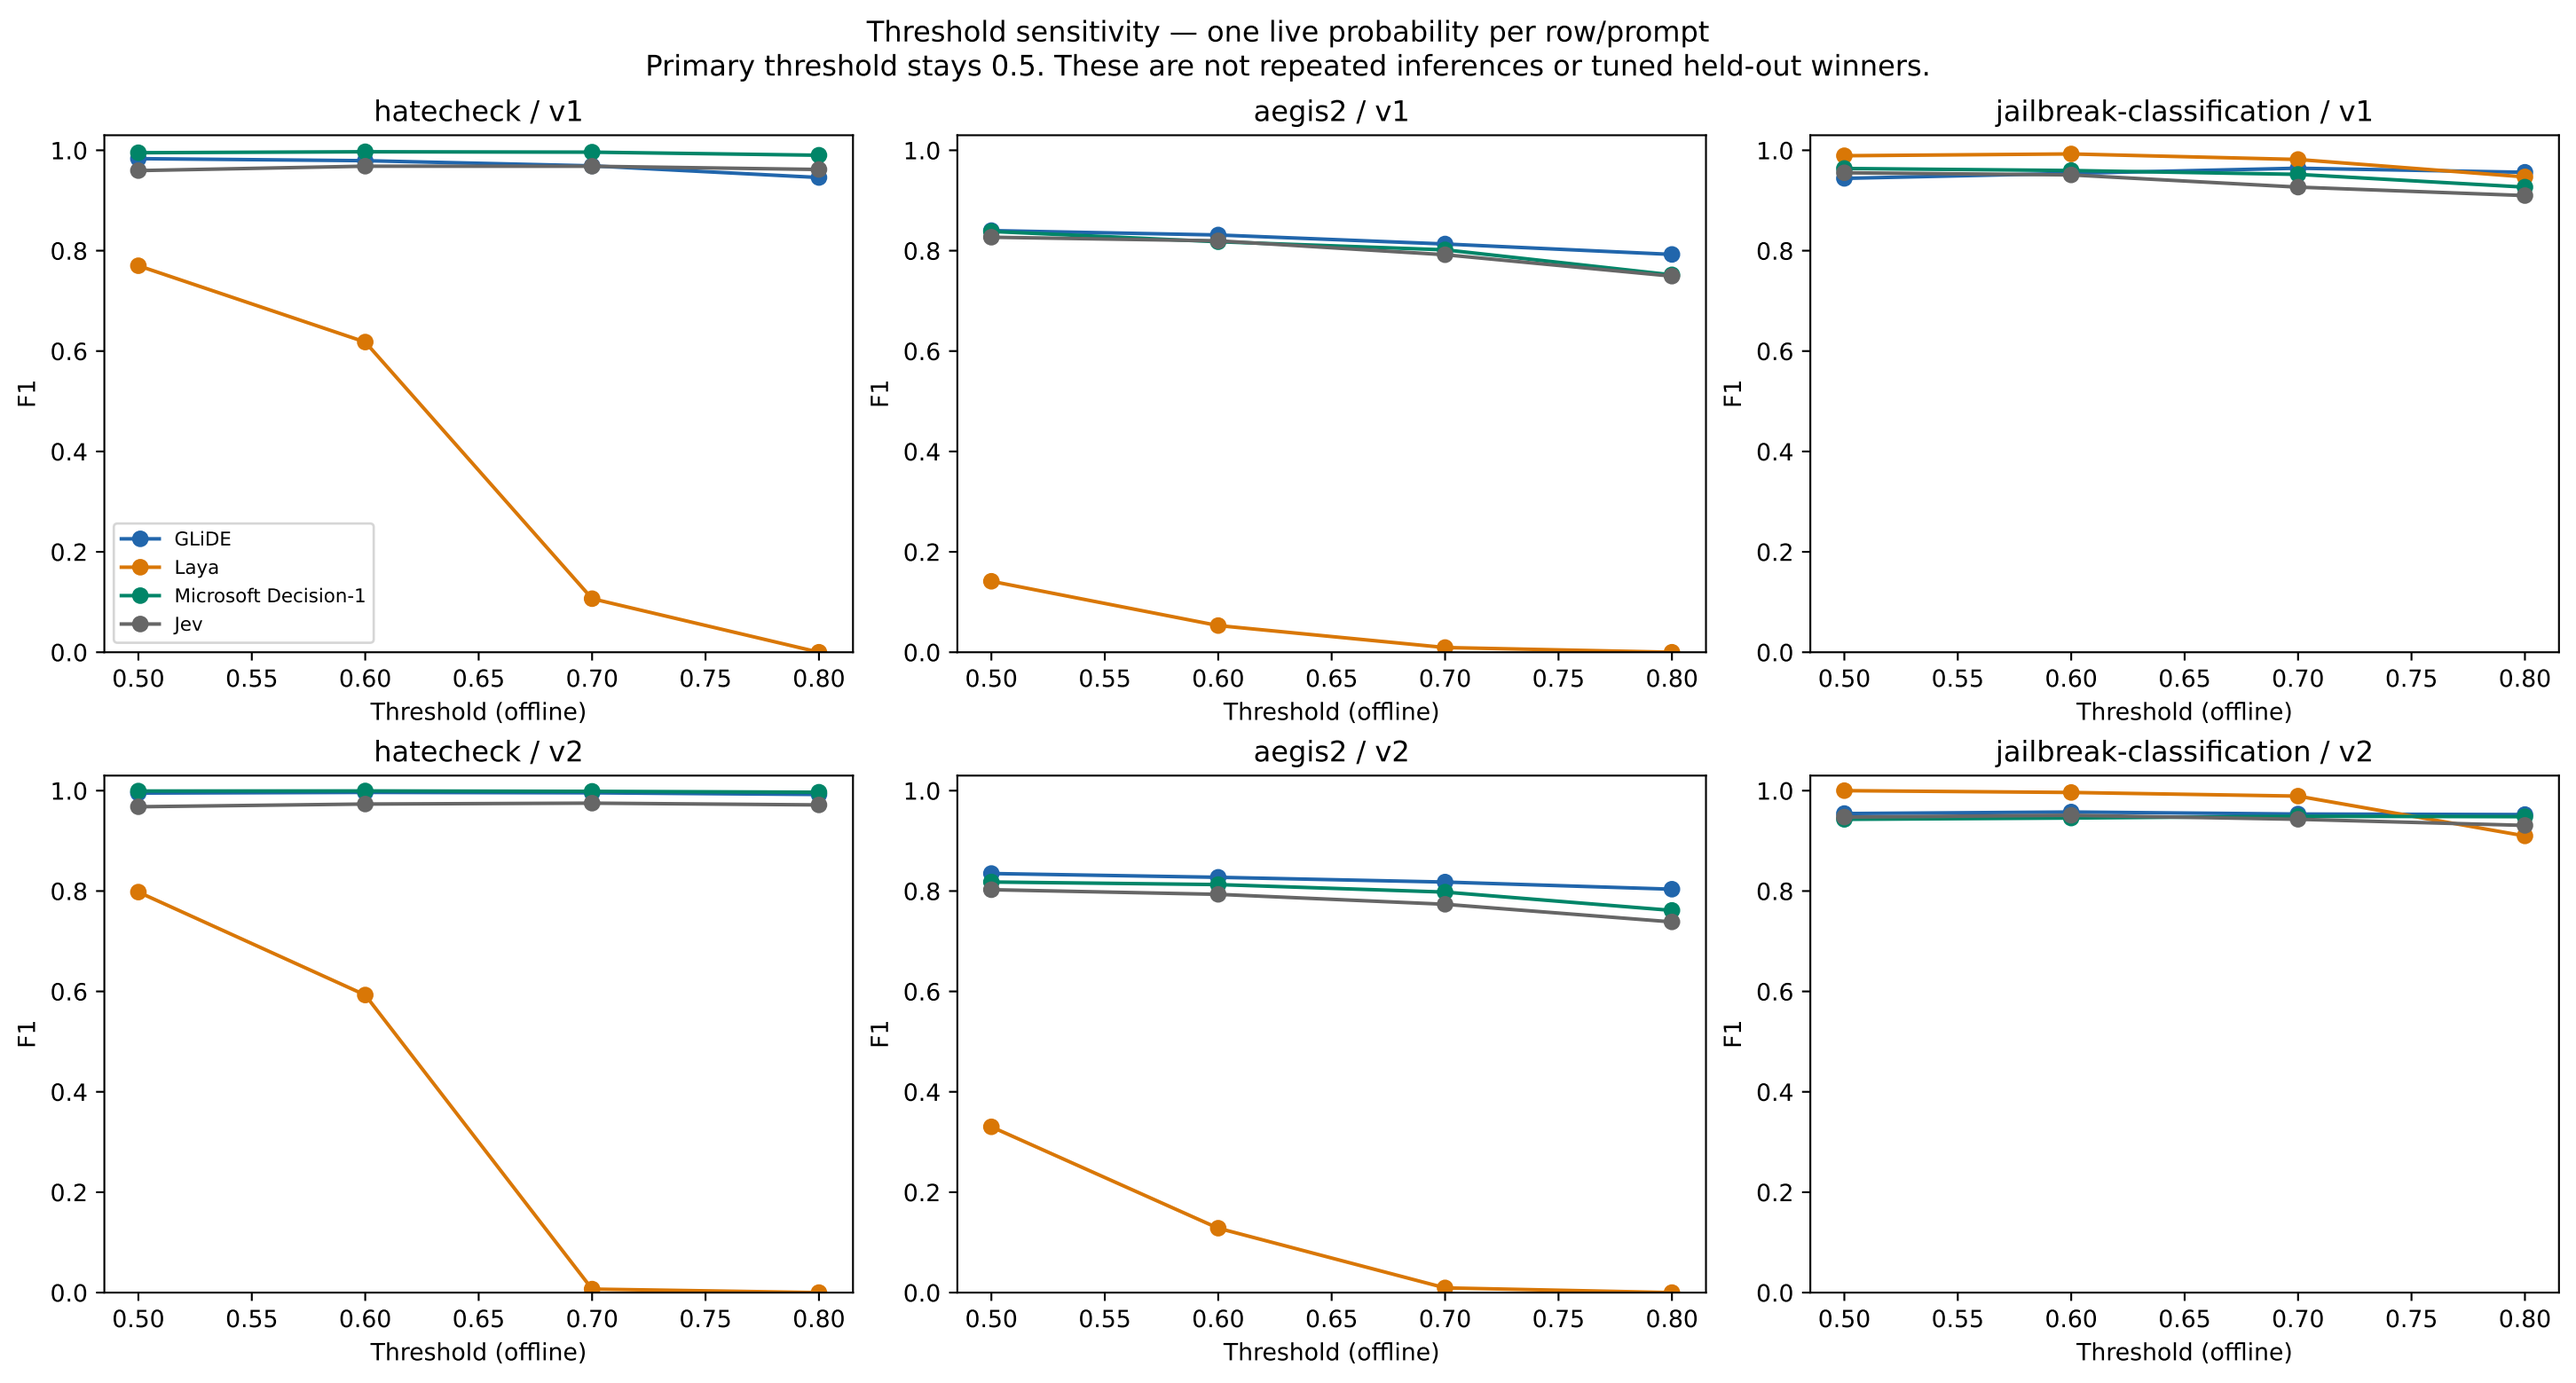

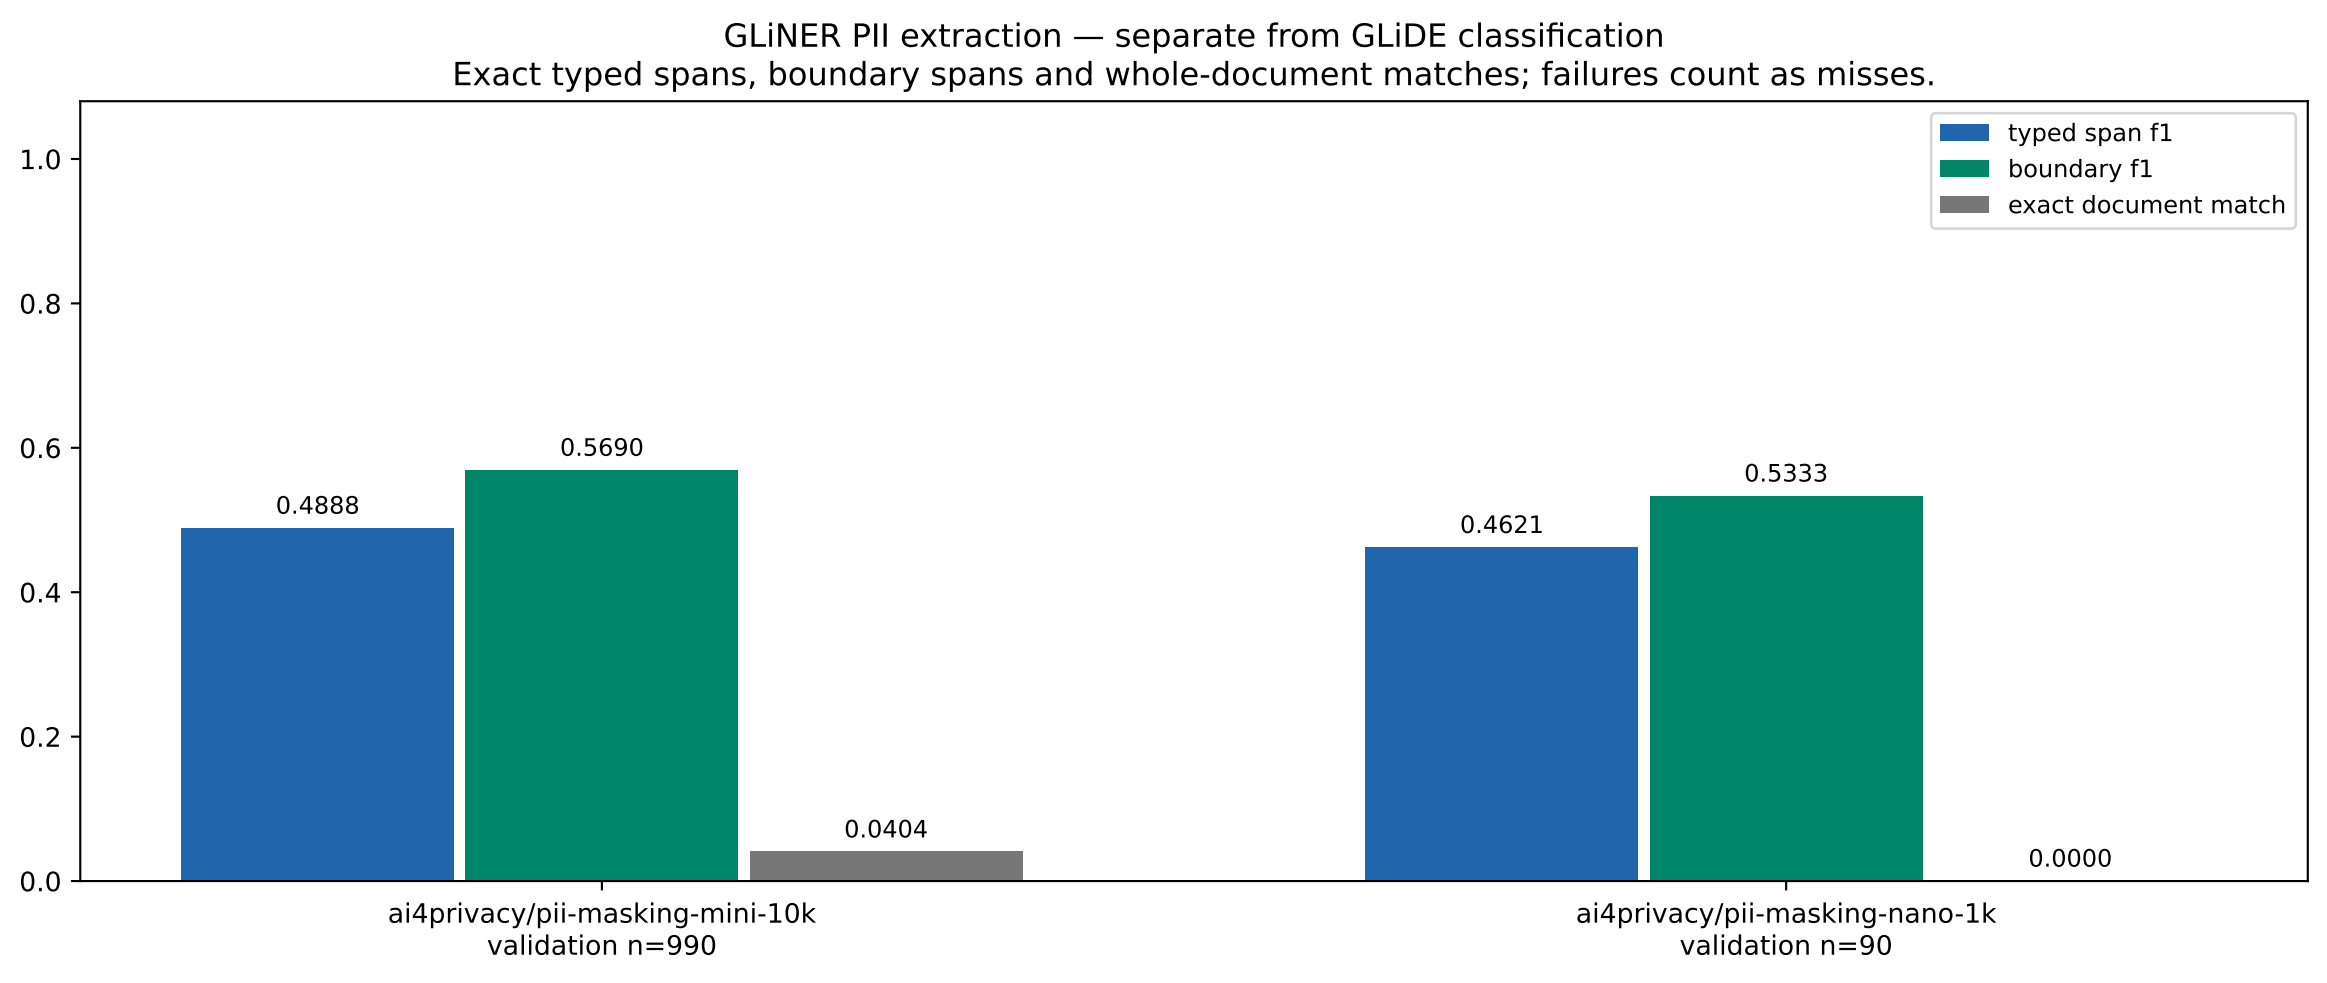

Threshold sensitivity — one live probability per row/prompt
Primary threshold stays 0.5. These are not repeated inferences or tuned held-out winners.

Timing under recorded workloads — not an unconstrained speed ranking
Concurrency and request caps differ; no historical latency or speedup comparison.
